

Assembly Instructions

Important Notes:

- Always unplug the rope light before installing, cutting, or modifying in any way.
- Unroll strip light before attaching to a power source.
- Cut only at designated marks.
- End cap must be attached before attaching to a power source.
- Cutting or damaging outer plastic tubing can present an electrical/fire hazard.

1. Cutting Strip Light

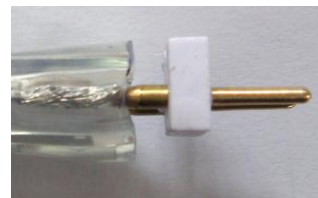

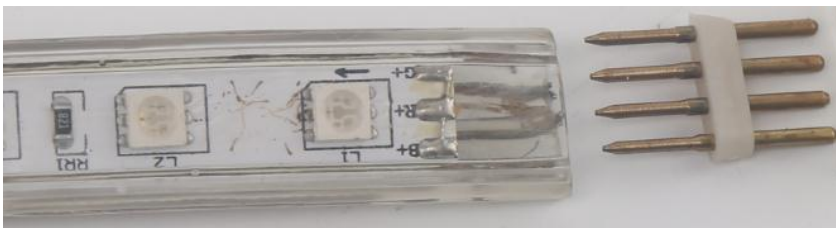

Cutting the strip to the length which you need from the cutting mark here (or from the space between every 1 meter); sometimes the strips are not with the cutting mark, but it must have obvious spacing which is wider than other points.

2. Secure the end cap

3. Attach the 4-pin Connector

Side view after securing of the 4-pin connector

Secure the 4-pin connector to the strip first. Pay attention that the 4 pins touch tightly to the 4 wires of the strip.

4. Connect the Power Cord

Attach the adaptor of the power cord to the 4-pin connector. If the light is still off, please try another end of the strip to attach the 4-pin connector or turn/reverse the adaptor of the power cord by 180 degree to try again.

5. Now it is ready to plug the power cord to enjoy the strip light
